Chaitanya Mittal. A50105213033
Deepansh Sood-. A50105213033
Karan Joshi- A50105213033

Under the guidance of

Ms. Divanshi Wangoo

Ms. Ulya Sabeel

Department of Computer Science & Engineering
Amity School of Engineering & Technology
Amity University Haryana

ABSTRACT

As a team we have made it our first priority to work for a better solution. We made sure to fix problems faced by us along with others and after having given a go-ahead flag by the respected faculties we have continued on the same aspect. As discussed our work has been on providing an alternate way of receiving notifications with an additional space for generating an out-pass. During the past days we have been working on the collection of data and API's along with their study and have made trail implementations of API's for SMS and Mailing systems. We did trails for storing images and pdf files into database and picking them up for sending as a response action. We have started paying attention to front-end development and have come up with trivial designing.

CRITICAL REMARKS

Our journey on the project encountered some time consuming and brain stressing states. We had no problem while implementing the API's though it took us a lot of time in collecting data and required resources. While working on the ideas of how things are to be implemented we had a lot of brainstorming on finding out the appropriate ways.

TOOLS AND TECHNIQUES USED

The main technologies used are:

- Java (JDBC Connectivity, Java Server Pages, Servlets, Socket Programming)
- Glassfish server
- HTML
- CSS
- JavaScript

The hardware and software requirements for the project are:-

Hardware Configuration

Processor: 1.3 GHz.

RAM: 128 MB

Free Space required on hard disk: 10 MB

Software Used

Web server with jre 1.6 properties (glassfish server)

Java2 development kit (1.6.0 former edition as a minimal requirement)

Java standard tag library (jsp pages deployment)
